Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 8-16, drawn to a method of making a sale offer over an electronic network system, including the step of completing the sale of the product or service through the electronic network system in response to an acceptance of an offer by a buyer within the predetermined period of time, classified in class 705, subclass 37.
- II. Claims 2, 6, 17, 20-25, drawn to a method for using an electronic network system to facilitate a transaction between a seller and a buyer, including the step of randomly displaying, through the electronic network system, the at least one sale offer to a selected buyer at an unexpected period of time, classified in class 705, subclass 37.
- III. Claims 3, 18, 19, drawn to an apparatus for facilitating a transaction between a buyer and a seller, comprising a storage device and a processor connected to the storage device, wherein said storage device stores a program for controlling the processor, and said processor is operative with the program for providing, on a Web site, to one or more selected buyers, a notice of a randomly generated sale offer and an acceptance form, receiving the acceptance form completed by the buyer, the completed acceptance form being received in response to the sale offer, receiving a payment identifier from the buyer specifying a credit card account, the payment identifier being associated with the sale offer and providing payment to the seller by using the payment identifier, classified in class 705, subclass 37.
- IV. Claim 4, drawn to an apparatus for facilitating a sale offer transaction between a seller and a buyer, comprising a random sale offer generating device configured for randomly generating an offer to purchase a product or service on an electronic network system, a

Application/Control Number: 09/609,228

Art Unit: 3624

Page 3

communication device configured for communicating the randomly generated offer through the electronic network system for a predetermined period of time to at least one selected buyer and a processing system configured for completing the sale of the product or service through the electronic network system in response to an acceptance of the offer by the buyer within the predetermined period of time, wherein the processing system is configured for removing the offer from the electronic network system when the at least one buyer does not indicate acceptance of the offer within the predetermined period of time, classified in class 705, subclass 37.

- V. Claim 5, drawn to an apparatus for facilitating a transaction between a seller and a buyer, comprising a processing system for receiving a sale offer parameter from the seller and randomly generating at least one sale offer to at least one selected buyer to purchase a product or service based on the sale offer parameter inputted from the seller and a random generation device configured for randomly displaying the at least one sale offer to a buyer at an unexpected period of time, wherein the processing system is configured for withdrawing the randomly generated sale offer in the event the buyer does not indicate acceptance of the randomly generated sale offer within a predetermined period of time after the random generation device has displayed the randomly generated sale offer, classified in class 705, subclass 37.
- VI. Claim 7, drawn to a system for providing an electronic sale offer from a seller to at least one selected buyer visiting an Internet web site, comprising a generating device for generating an electronic sale offer of a product or service based on at least one parameter defined by the seller, means for displaying the electronic sale offer of the product or service to the at least one selected buyer visiting the Internet web site at a point in time unknown to the buyer and

Application/Control Number: 09/609,228 Page 4

Art Unit: 3624

a timing device in communication with the generating device and the display means for withdrawing the displayed sale offer from the Internet web site if the at least one buyer does not indicate acceptance of the offer within a predetermined period of time, classified in class 705, subclass 37.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as sub combinations disclosed as usable together in a single combination. The sub combinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I relates to a method of making a sale offer over an electronic network system, including the step of completing the sale of the product or service through the electronic network system in response to an acceptance of an offer by a buyer within the predetermined period of time, whereas invention II relates to a method for using an electronic network system to facilitate a transaction between a seller and a buyer, including the step of randomly displaying, through the electronic network system, the at least one sale offer to a selected buyer at an unexpected period of time. See MPEP § 806.05(d). Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper even though they are classified in the same class and sub class.

Inventions I and III are related as sub combinations disclosed as usable together in a single combination. The sub combinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I relates to a method of making a sale offer over an electronic network system, including the steps of completing the sale of the product or service through the electronic network system in response to an acceptance of an offer by a buyer within

Page 5

Art Unit: 3624

the predetermined period of time, whereas invention III relates to an apparatus for facilitating a transaction between a buyer and a seller, comprising a storage device and a processor connected to the storage device, wherein said storage device stores a program for controlling the processor, and said processor is operative with the program for providing, on a Web site, to one or more selected buyers, a notice of a randomly generated sale offer and an acceptance form, receiving the acceptance form completed by the buyer, the completed acceptance form being received in response to the sale offer, receiving a payment identifier from the buyer specifying a credit card account, the payment identifier being associated with the sale offer and providing payment to the seller by using the payment identifier. See MPEP § 806.05(d). Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper even though they are classified in the same class and sub class.

Inventions I and IV are related as sub combinations disclosed as usable together in a single combination. The sub combinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I relates to a method of making a sale offer over an electronic network system, including the steps of completing the sale of the product or service through the electronic network system in response to an acceptance of an offer by a buyer within the predetermined period of time, whereas invention IV relates to an apparatus for facilitating a sale offer transaction between a seller and a buyer, comprising a random sale offer generating device configured for randomly generating an offer to purchase a product or service on an electronic network system, a communication device configured for communicating the randomly generated offer through the electronic network system for a predetermined period of time to at

Application/Control Number: 09/609,228

Art Unit: 3624

least one selected buyer and a processing system configured for completing the sale of the product or service through the electronic network system in response to an acceptance of the offer by the buyer within the predetermined period of time, wherein the processing system is configured for removing the offer from the electronic network system when the at least one buyer does not indicate acceptance of the offer within the predetermined period of time. See MPEP § 806.05(d). Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group IV, restriction for examination purposes as indicated is proper even though they are classified in the same class and sub class.

Similarly other pairing of inventions stated above are related as sub combinations disclosed as usable together in a single combination. These inventions are distinct from each other as can be evident from the definition of the groups described above. Also they require separate searches and hence restriction of these inventions for examination purposes as indicated is proper.

- 3. A telephone call was made to Mr. Christopher W. Day on June 23, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.
- 4. Applicants are advised that reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Narayanswamy Subramanian whose telephone number is (703) 305-4878. The examiner can normally be reached Monday-Thursday from 8:30 AM to 7:00 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's
